

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously Presented) A method to identify a previously visited URL in results from a search, comprising:

loading a URL personal databook collection object in response to receiving the results of a network search by a search engine, wherein the URL personal databook collection object comprises URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user; and a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object;

presenting all search results that satisfy the at least one search term including any URL references that have been previously visited by the user and selectively saved in the URL personal databook collection object by the user and including any URL references that satisfy the at least one search term but have not been previously visited by the user and therefore have not been saved in the URL personal databook collection object; and

identifying any matches between results from the search and any URL object references of previously visited URLs in the URL personal databook collection object.

2. (Original) The method of claim 1, further comprising comparing the results from the search to any URL object references in the URL personal databook collection object to identify any matches.

3. (Previously Presented) The method of claim 1, further comprising visually identifying any matches in the results from the search.

4. (Original) The method of claim 3, further comprising visually identifying any matches by at least one of a predetermined icon, a predetermined text font and highlighting.
5. (Previously Presented) The method of claim 3, further comprising presenting the saved comment associated with any match only in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved comment is presented as a balloon from the associated match on a page displaying the search results.
6. (Previously Presented) The method of claim 1, further comprising selecting any results from the search containing content of interest for future reference.
7. (Previously Presented) The method of claim 6, further comprising storing only search results selected by the user in the URL personal databook collection object.
8. (Previously Presented) The method of claim 7, wherein storing the selected search results comprises storing the URL reference.
9. (Original) The method of claim 8, further comprising storing the URL reference as a serialized object.
10. (Previously Presented) The method of claim 7, further comprising storing any other comments in association with the stored search results.
11. (Currently Amended) A method to identify a previously visited URL in results from a search, comprising:

entering at least one search term in a search engine;

comparing the results from a network search by the search engine to any URL object references of previously visited URLs in a URL personal databook collection object loaded after receiving the results of the network search, wherein the URL personal databook collection object comprises URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user; and a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object; and

visually identifying any matches between the results from the search and any URL object references in the URL personal databook collection object.

12. (Original) The method of claim 11, further comprising loading the URL personal databook collection object in response to presenting the results from the search.

13. (Previously Presented) The method of claim 11, further comprising presenting any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved or captured comments are presented on a page displaying the search results.

14. (Original) The method of claim 11, further comprising:

selecting any results from the search containing content of interest for future reference in response to no matches; and

storing any selected search results in the URL personal databook collection object.

15. (Original) The method of claim 14, further comprising:

presenting a dialogue box to enter comments related to any stored search results; and
storing any comments in association with the stored search results.

16.-33. Cancelled.

Please add new claim 34:

34. (New) A method to identify a previously visited URL in results from a search, comprising:

receiving results from a search of websites on a network corresponding to at least one search term, wherein only the at least one search term is entered by a user and only the at least one search term is used by a search engine to perform the search;

loading a URL personal databook collection object only after receiving the results of the network search by the search engine, wherein the URL personal databook collection object comprises URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user; and a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object;

presenting all search results that satisfy the at least one search term including any URL references that have been previously visited by the user and selectively saved in the URL personal databook collection object by the user and including any URL references that satisfy the at least one search term but have not been previously visited by the user and therefore have not been saved in the URL personal databook collection object;

identifying any matches between results from the search and any URL object references of previously visited URLs in the URL personal databook collection object; and

presenting the saved comment associated with any match only in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved comment is presented as a balloon from the associated match on a page displaying the search results.
